

HOW TO BATH YOUR BABY

FOR BABY

Keep the first few baths brief and create a calm environment.

Prepare everything in advance to prevent the baby from getting cold. Ensure the water temperature is between 37-38°C—test it with your elbow.

Avoid using soap on the baby's face for the first six weeks. For the body, use mild baby washes with a neutral pH and minimal additives like Baby Dove Sensitive Fragrance-Free Body Wash.

Keep the baby warm after bath time by wrapping them snugly in a towel.

Always keep one hand on the baby for safety.
